Info-Gap Decision Theory: Decisions under Severe Uncertainty 2nd Edition

Yakov Ben-Haim

ISBN: 0-12-373552-1

Pages: 400

The freedom to decide is an opportunity to err; but every opportunity is also a potential for success. This book presents a fresh approach to the problem of deciding responsibly with deficient information. An info-gap is the disparity between what the decision maker knows and what needs to be known to assure a good decision. This idea is developed into a quantitative tool for decision-making under severe and unstructured uncertainty.

"A landmark book... a new and revolutionary approach for tough decision problems when little information is available".

Prof. Keith Hipel, Dept. of Systems Design Engineering, University of Waterloo.

"Of fundamental importance to all applied sciences."

Prof. Mark Burgman, School of Botany, University of Melbourne.

"Revolutionary strategy implications."

Prof. Clifford C. Dacso, MD, MBA, Distinguished Research Professor, University of Houston and Methodist Hospital Research Inst.

"Distinctive new theory of decision making under severe uncertainty."

Prof. Daniel Sipper, Dept. of Industrial Engineering, Tel Aviv University

Topics:

Severe uncertainty
Robustness and opportuneness
Value judgments
Gambling and risk sensitivity
Value of information
Learning
Philosophical implications of info-gap uncertainty

Applications:

Engineering design
Biological conservation
Behavioral Science
Medical decisions
Economic policy
Project management
Bio-terror preparedness
