

Dilemmas of Wonderland: Decisions in the Age of Innovation

Yakov Ben-Haim

Oxford University Press

ISBN 978-0-19-882223-3

Reviews

“This is an extraordinary book. It is incredibly broad in scope, with massively important implications. The writing is clear and accessible. *Dilemmas of Wonderland* should have a big impact on how professionals and ordinary citizens go about making decisions and living their lives.”

Barry Schwartz

Professor Emeritus, Swarthmore College, and Visiting Professor, Haas School of Business, U.C. Berkeley

“This book offers an intuitive framework—info-gap—to deal with all kinds of fundamental uncertainty. It is very topical in a world where uncertainty is widespread, due to rapid technical innovations, high political uncertainties and structural changes in cultures and societies. The author demonstrates with several practical examples the use of info-gap as an innovative tool to guide decision makers in an uncertain world.”

Jan Willem van den End

Senior Economist, Economic Policy and Research Division of *De Nederlandsche Bank*
